

RILEY HARPER

**Ambitious,
Hard Working,
Equitable**

Shuford Life / May 2024

May 2024

Riley Harper is a third-year undergraduate student at the University of North Carolina at Chapel Hill, where he is pursuing a major in Statistics and Analytics. Riley has a profound interest in the fields of psychology and artificial intelligence, particularly in their application to statistical methods. His academic journey is marked by a recent contribution to the field through his paper analyzing Dr. Daughters original paper, "Distress Tolerance as a Predictor of Early Treatment Dropout in a Residential Substance Abuse Treatment Facility." This work, conducted under the guidance of Dr. Stacey Daughters in the BRANE Lab, revisits and validates the statistical methodologies employed in Dr. Daughters' seminal research, utilizing the original dataset for analysis.
